Education

Kalinga Institute Of Industrial Technology May 2026
Bachelor of Technology in Computer Science (CGPA: 8.23) *Bhubaneswar, Odisha*

- **Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems

Experience

IFFCO June 2024 – August 2024
Software Development Intern *Prayagraj, Uttar Pradesh*

* Worked with the IT department on improving internal HRMS systems and data handling processes.
* Supported automation initiatives that reduced repetitive manual work and improved workflow efficiency.
* Assisted in preparing reports, testing updates, and documenting system improvements under team guidance.
* Gained exposure to software development practices, collaboration, and real-time problem-solving in a corporate environment.

Research Publication Dec 2024 – April 2025
Fair Storage Distribution Using a Game Theoretic Approach *Bhubaneswar, Odisha*

* Proposed a game-theoretic model for fair storage sharing among IoT sensor nodes in mist computing environments.
* Used the Shapley value to determine each node's contribution, ensuring balanced load distribution and system efficiency.
* Developed an algorithm to automate the process, outperforming traditional methods in fairness and resource utilization.
* Presented at CCICT 2025 and published in IEEE Xplore; received the Best Paper Award for innovation in distributed computing.

Projects

CampusLinkr | *Python, SQL, Data Processing, Azure*

* Designed a centralized platform to organize and manage data from students, recruiters, and institutions efficiently.
* Planned data workflows to collect, process, and organize information across different platform components.
* Worked with structured data and database operations to support efficient information management and retrieval.
* Analyzed user requirements and feedback to identify improvements in data handling and overall platform performance.

Heart Disease Detection | *Python, SQL, Pandas, Scikit-Learn*

* Built a data-driven application involving data collection, preprocessing, transformation, and machine learning workflows.
* Processed and analyzed healthcare datasets using Python and Pandas to prepare structured data for model development.
* Performed data cleaning and transformation to improve data quality and support reliable prediction results.
* Tested the application and maintained project documentation and version control using Git.

Skills

Programming Languages: Python, SQL

Tools & Platforms: Databricks, Microsoft Azure, MySQL, Git, Jupyter Notebook

Core Competencies: Data Engineering, Data Pipelines, Data Transformation, Data Warehousing, Data Integration, SQL Query Optimization, Database Management, Problem-Solving

Volunteer Experience

The Philanthropy Hand
Wing Executive

* Led a 100+ member student team and coordinated multiple social initiatives with efficient task management.
* Improved team collaboration and ensured timely completion of community-driven projects.
